

FirstRound Interview Scorecard

Candidate	Test Candidate
Role	Junior AI Engineer
Interview date	2026-08-14
Duration	7 seconds
GitHub-grounded questions asked	
Overall score	3.5
Recommendation	BORDERLINE

Recommendation reasoning

The candidate showed some strengths in backend and RAG design but lacked depth in Python and did not provide sufficient evidence of their skills in that area. Overall, they demonstrated potential but need to improve their technical depth.

Competency scores

backend — score 3/5 (confidence 0.8)

"I built a FastAPI service with JWT auth and Postgres for storage, deployed on Render."

The candidate provided a correct overview of their REST API project, mentioning key technologies like FastAPI, JWT authentication, and Postgres, but lacked depth and specific details about the project's functionality or challenges faced.

rag — score 4/5 (confidence 0.9)

"I'd chunk documents by paragraph with overlap, embed with a sentence-transformer model, store in a vector DB like Chroma, and retrieve top-k with a similarity threshold."

The candidate provided a clear and specific design for a RAG pipeline, detailing the chunking method, embedding model, storage solution, and retrieval strategy, which demonstrates a solid understanding of the topic.

Strengths

- Demonstrated a solid understanding of RAG pipeline design.
- Mentioned relevant technologies in their backend project.

Concerns

- Lacked depth in discussing their Python experience.
- Failed to provide meaningful insights during the GitHub deep dive.

Guardrail flags

- `evidence_guardrail_rejected:python: evidence_quote not found verbatim in transcript`
